

Hill Laboratories

Podiatry Chair

The most affordable
chair available.

*Shown with
navy upholstery
and beige base*

The Hill Adjustable Podiatry Model is designed with several features usually associated with far more expensive podiatry chairs. Its quality design and craftsmanship draws from over 55 years of Hill Laboratories' manufacturing experience.

Powered by electric actuators, the HA90P has three distinct adjustable motions which position the chair smoothly, quietly, and precisely.

Adjustable height provides a comfortable 23" to 36" working range. A recline feature tilts the entire chair to any desired angle. The electric tilt back may be completely lowered to convert the HA90P to flat table.

All chair positions are controlled by convenient foot pedals. The HA90P is also available with an 'auto-return' option which automatically repositions the chair for the next patient.

Special features include a tilting foot section which can extend for taller patients, a slide-out stainless steel pan, an adjustable headrest for patient comfort and fold-down armrests. Optional features include a flexible-arm lamp and adjustable curtain (see other side).

The contour seat and back add style and comfort. The attractive vinyl upholstery is available in several colors and designed for years of continual use.

- See other side for more important information -
