

ElectroLight™

Infrared Light Therapy Device

Only \$1595

*With 4 Infrared Applicators and
5 Packs of Dual-Sided Electrodes.*

Add Infrared light to your stimulation unit for combination therapy.

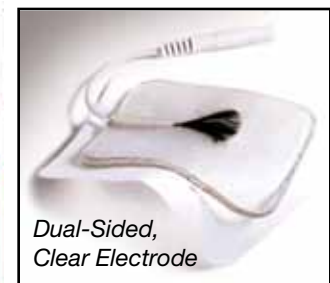

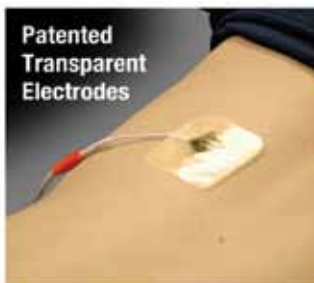

The Electro-Light is an infrared therapy device that can be used in conjunction with a separate muscle stimulation machine. The Electro-Light uses a patented transparent electrode called the Dual-Sided Electrode™. The Dual-Sided Electrode is clear so infrared light can pass through the electrode at the same time as muscle stimulation. The Dual-Sided Electrodes can be placed on a patient similar to a standard electrode. The Dual-Sided Electrodes are sticky on both sides so the Electro-Light applicators can stick to the electrode or a strap can secure the applicator to the top-side of the electrode. Any stimulation machine can be used in combination with the Electro-Light.

Electro-Light Features:

- Electro-Light Console with Adjustable Time and Frequency Settings
- 4 Infrared (880nm) and Red(625nm) Thermal Applicators with 340mW of Power Each
- 5 Packs of Dual Sided Electrodes (2" x 2" square)
- Patient Cut Off Switch
- FDA Clearance
